PHOTOGRAPHIC COUPLERS HAVING IMPROVED IMAGE DYE LIGHT STABILITY

Summary of invention:

We have found that couplers containing an N-alkyl sulphonamide substituent in the ballast residue display superior image dye light stability relative to analogous couplers without the N-alkyl substituent. The practice of the invention is exemplified by the comparison of couplers A and B with C (see structures below)

When processed strips of coatings of a silver chloride emulsion with dispersions of each of the above three couplers in solvent (0.5x) were faded for 6 weeks at 50klux, the following density losses were observed:

Coated Dispersion	Density Loss from 1.0
C	-0.40
A	-0.27
B	-0.25
D	-0.31

Comparable data for a production dye D is also included. The advantage shown by the two N-alkylated examples A and B over both C and the product sample is clearly evident.

Advantages:

Improved cyan image light stability
